In style. On budget. Go figure.™

The Quick Tap™ entertainment refrigerator quenches your thirst for style and satisfies the party animal within—all in one fell swoop. A refillable beverage dispenser makes it easy to keep crisp cold water, raspberry fruit punch or Long Island iced tea perfectly

# What's on Tap?

The dispensing system of the Quick Tap™ entertainment refrigerator works best with clear liquids that flow easily such as water, apple juice or your old boyfriend's "secret" margarita recipe. Opaque beverages like milk or thick juices that contain pulp or seeds may clog the valve.

But that's OK. Smoothies and milkshakes are best poured straight from the blender with a spoon on the side anyway.

IT IS IMPORTANT TO CLEAN THE DISPENSING SYSTEM BEFORE USING FOR THE FIRST TIME.

## POUR IT IN

Make sure the storage tank and valve are clean and seated firmly in the refrigerator door.

Add up to 3 liters of your chosen beverage to the tank. Snap cover firmly onto filled tank and make sure cap is tightly closed.

Dispense beverage by pressing a glass against the dispenser lever.

*Note: Before the first use and between refills dispense at least 1 liter of clean water to clear the system and remove air from the dispenser valve.*

## WASH IT UP

- ~ Clean beverage tank, cover and dispensing valve before each refill.
- ~ Remove tank from the refrigerator door. Detach cover and plastic cap. Take valve unit out of tank by turning it counterclockwise.
- ~ Wash all pieces in warm water with mild dish soap. Use a soft cloth since a rough or abrasive cloth or cleaner could damage the finish.
- ~ To clean the exterior of the dispenser, wipe down the housing and lever with a soft damp cloth. The removable drip tray can be washed with warm water and mild soap.

## How long will beverages stay fresh in the dispenser tank?

*Keeping beverages cold does not mean that they will keep longer. Storing beverages in the dispenser tank is similar to storing them in a pitcher or other container in the refrigerator. Do not store a beverage in the system for longer than a week. Beverages may acquire a strange taste if the dispenser is not used regularly.*

## Can I use carbonated beverages in the dispenser?

*Remember, placing beverages in the dispenser tank is similar to storing them in a pitcher or opened bottle in the refrigerator. Carbonated beverages can be placed in the dispenser, but they may lose their fizz within a 6-hour period.*

## Is there a way to lock the dispenser to guard against unintended dispensing by children or pets?

*There is a lever lock on the back of the dispenser lever. When activated, this lock keeps the dispenser lever from moving. Push down on the lock until it rests firmly against the back of the dispenser housing.*

## How often should dispenser system parts be replaced?

*It is recommended that the dispenser valve be replaced every 6 months. An extra dispenser valve is included with each new refrigerator. Visit [amana.com](http://amana.com) to purchase replacement parts for the dispenser system.*

## CAN RACK

Rack 'em up. Store beverage cans or other small containers, like yogurt, in the refrigerator door for quick access.

## WINE RACK

Would you prefer Chardonnay, Chablis or Pinot Grigio? Let guests pick from a wine list at your next dinner party. The convenient rack provides storage for five full-sized bottles.
