

Stronger than steel.™

Quote and delivery on your schedule

Easy-to read packaging

Impartial engineering consultation

Time-saving product design

We don't merely supply steel. It goes far beyond that. We supply strong, proactive solutions and forward-thinking ingenuity—anything it takes to make your job, and your life, easier.

From product innovation to agile customer service, ClarkWestern offers you all of the quality, ease and support you're looking for in a partner. Let us take the load off the way you quote, buy and work with steel.

Labor-saving innovations

Nationwide presence and response

Special-count bundling and job-ready loading

Web-based submittal generator and product selection tools

Stud and track

Support from a complete system.

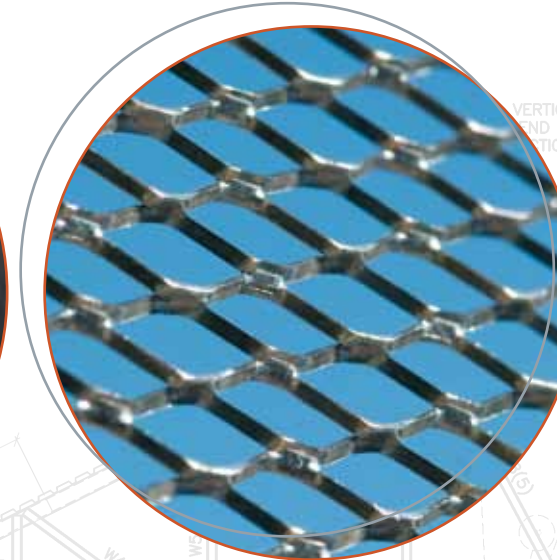

More than just stud and track, our products are engineered and manufactured to perform across a broad range of framing, drywall and lath disciplines. We not only want to be your single source for all cold-formed steel and accessories, but, more importantly, we believe that products designed to work together, work better. Our full line offering will save you time, money and headaches in the long run.

We call it a systems approach. You'll call it stress relief.

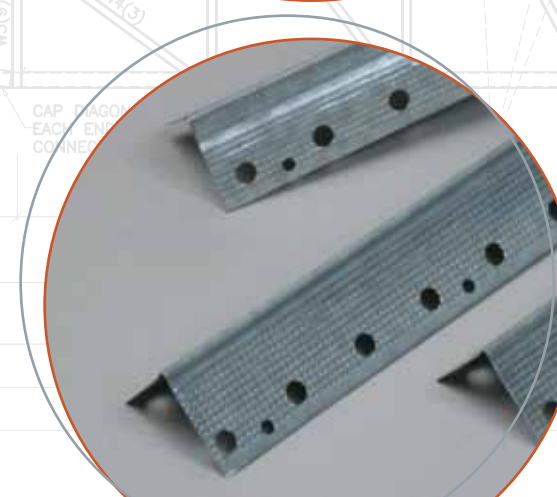

RedHeader RO™

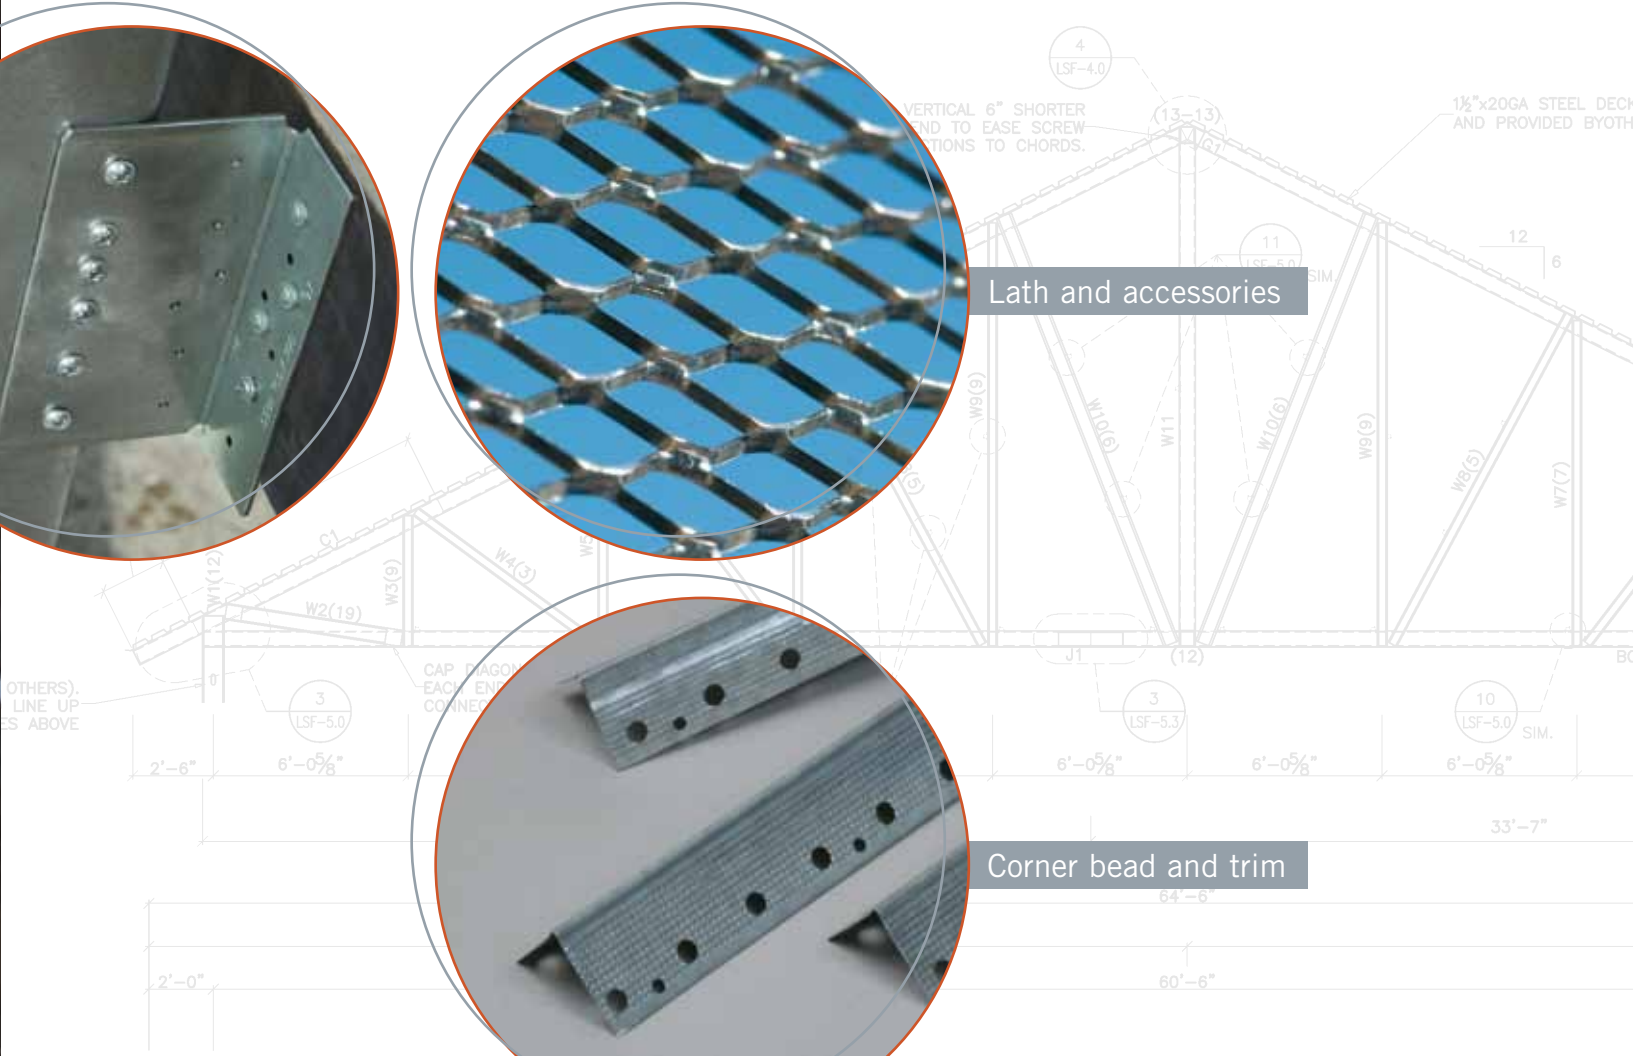

SwiftClip™

Lath and accessories

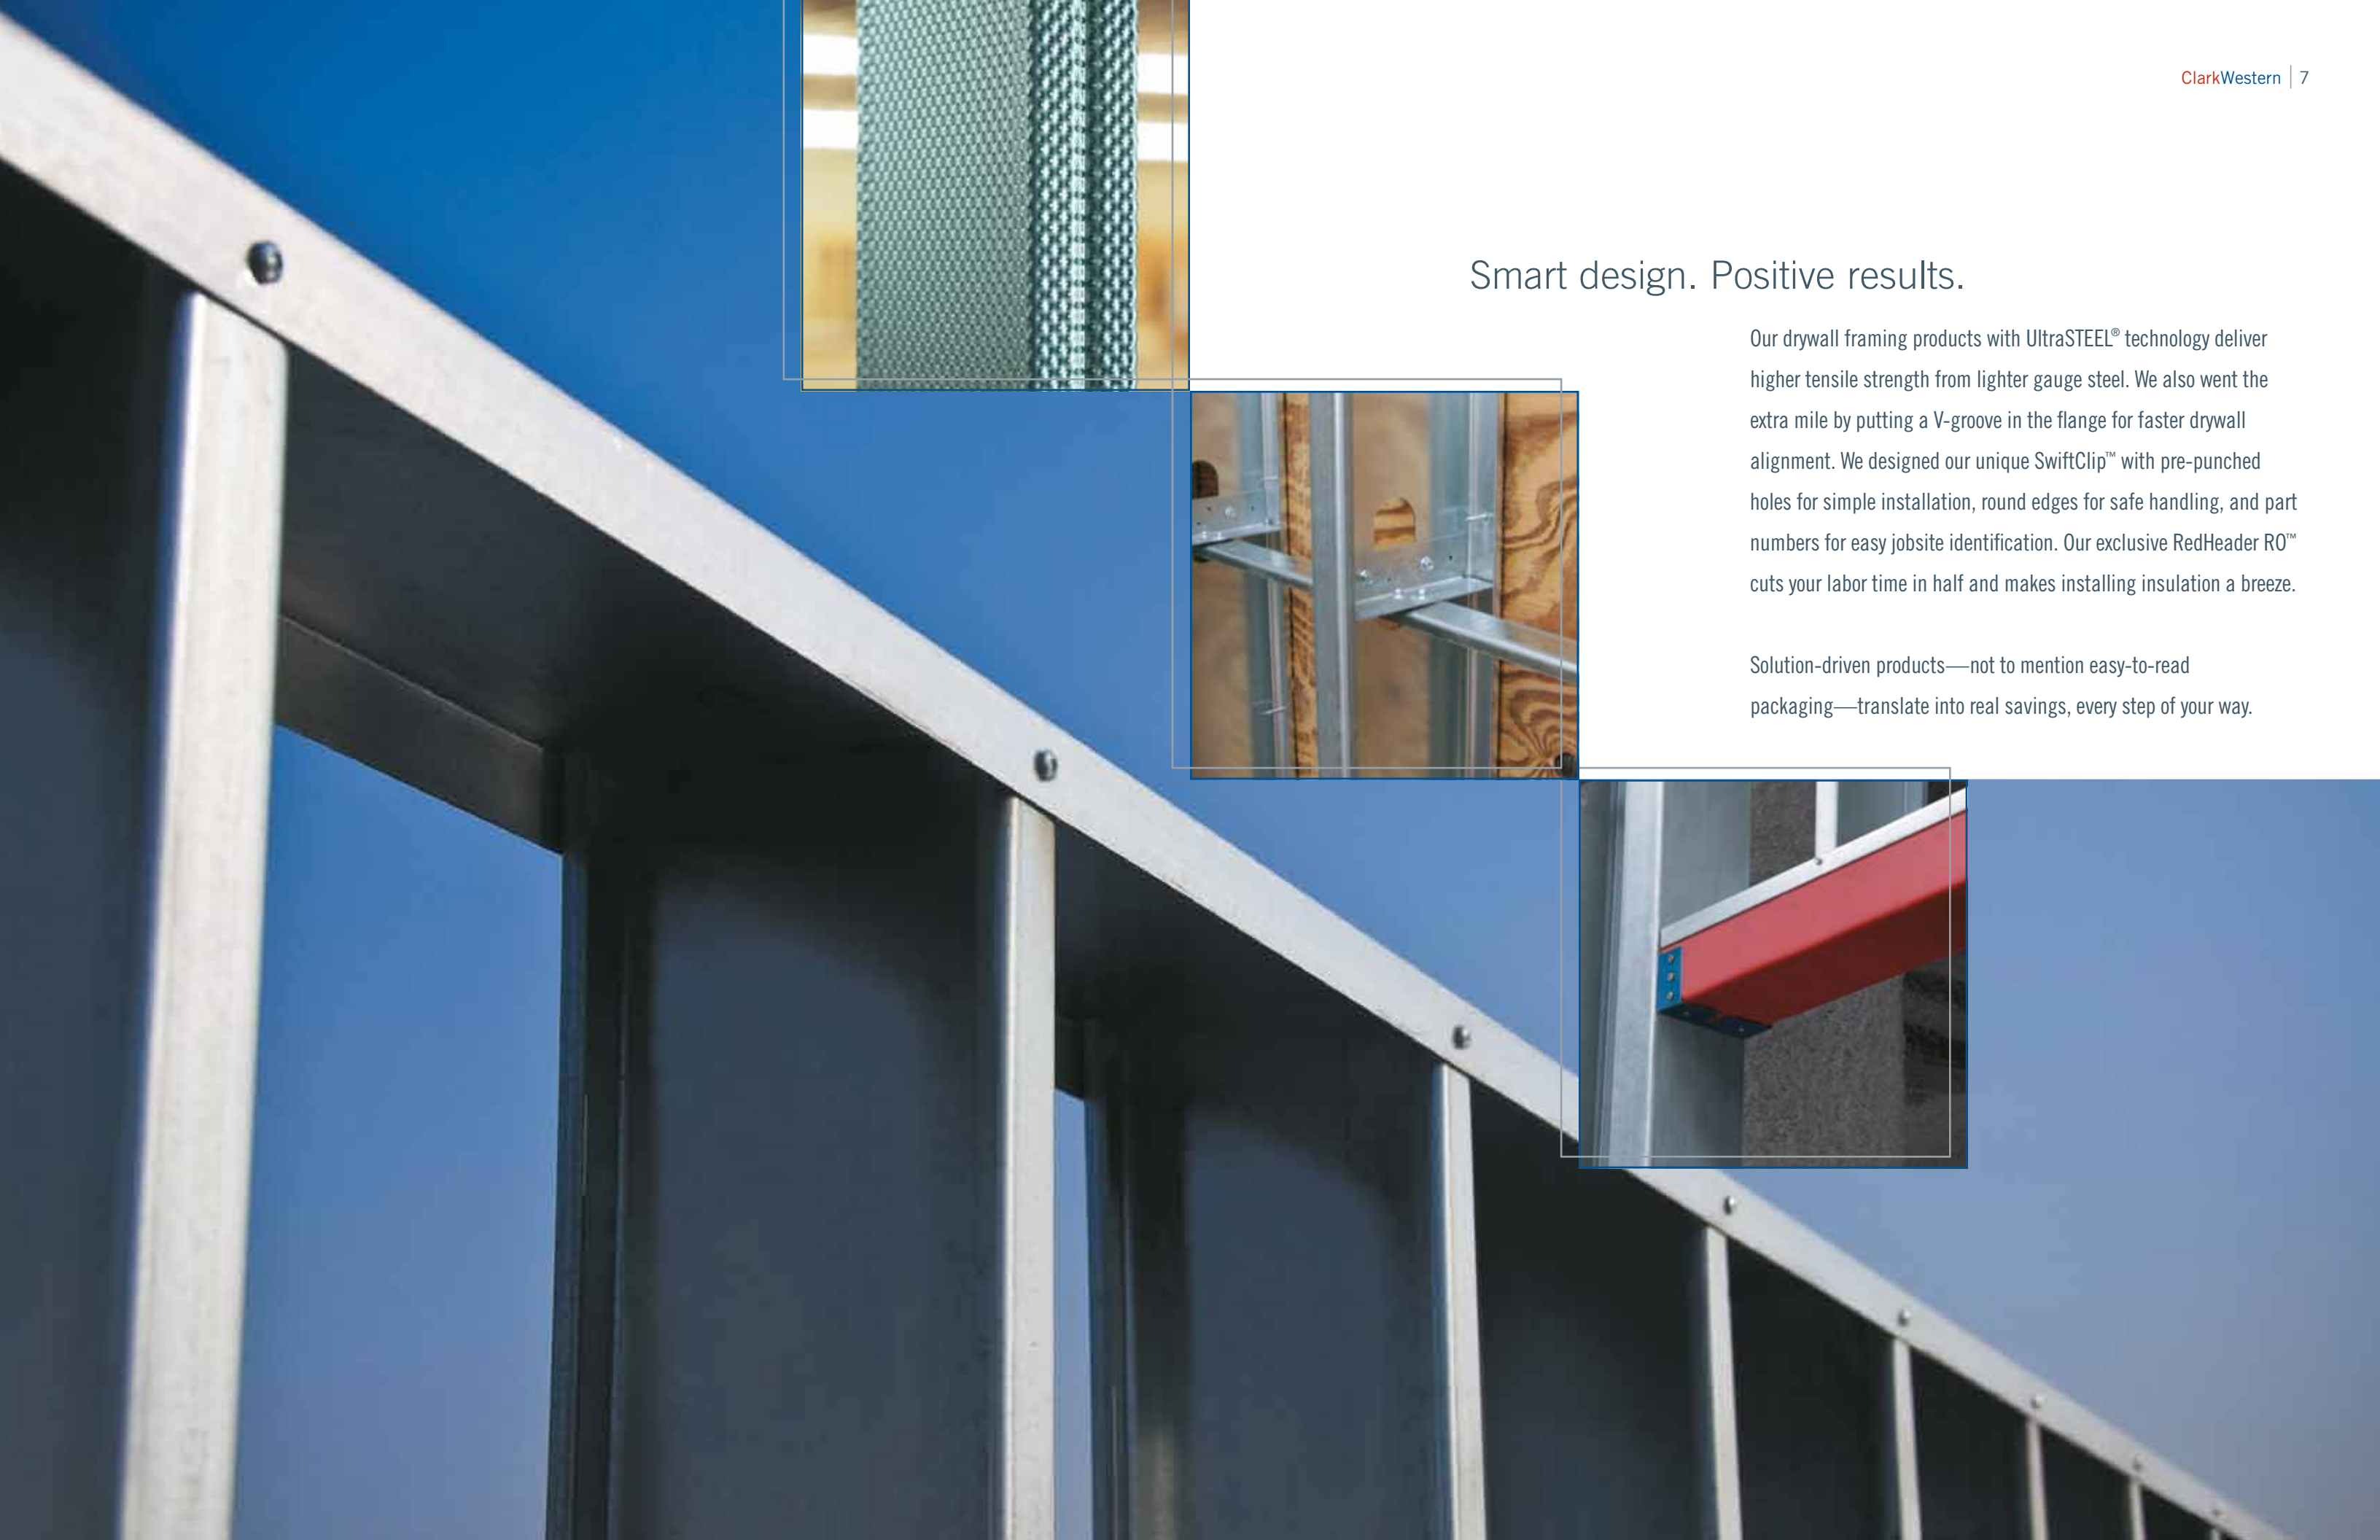

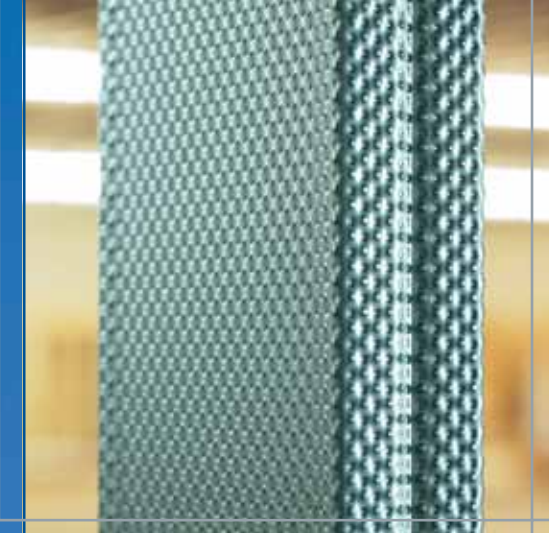

Corner bead and trim

Smart design. Positive results.

Our drywall framing products with UltraSTEEL® technology deliver higher tensile strength from lighter gauge steel. We also went the extra mile by putting a V-groove in the flange for faster drywall alignment. We designed our unique SwiftClip™ with pre-punched holes for simple installation, round edges for safe handling, and part numbers for easy jobsite identification. Our exclusive RedHeader RO™ cuts your labor time in half and makes installing insulation a breeze.

Solution-driven products—not to mention easy-to-read packaging—translate into real savings, every step of your way.

The most recycled material in the world.

Steel is good for the environment in numerous ways—fewer cars and appliances are going into landfills; natural resources like iron, limestone and coal are conserved; thousands fewer BTUs of electricity are used for every pound of recycled steel. And landfill waste generated from steel framing is approximately 3% of that created by wood framing.

There's also a less altruistic reason to use steel: ClarkWestern steel framing can help achieve credits that contribute to LEED® certification, adding value to your buildings.

Greener building practices are inevitable. We can help them take root.

Unshakable service.

Our quote and delivery turns accommodate your timeline, not ours. We offer special-count bundling, job-ready loading and logistical support. Our customer service is truly nationwide. Our Design Services department delivers impartial consultation. Technical support is free of charge. Online tools are at your fingertips whenever you need them.

If you haven't caught on yet—yes, it is all about you. It's actually the relationships we build with our clients that make us stronger than steel.
