JENN-AIR®

A Legacy of Luxury

Jenn-Air brand is synonymous with high-end kitchen appliances that offer sophisticated design, innovative technology and exceptional performance.

First recognized for creating the legendary downdraft cooktop and bringing convection cooking into the home, Jenn-Air brand makes exceptional appliances for the entire kitchen – from powerful, professional-style ranges to stylish, built-in refrigerators.

This legacy of luxury and uncompromising innovation is reflected in precision-crafted products like the revolutionary Accolade® downdraft ventilation system and the intuitive Culinary Center which is available on select Jenn-Air® wall ovens. Jenn-Air brand also offers endless culinary possibilities with the built-in steam & convection wall oven, and the Jenn-Air™ built-in coffee system that makes it easy to brew fresh-ground coffee and robust espressos at home. And when it comes to cleaning, our powerful TriFecta™ dishwashers clean as good as they look.

Our appliances offer you unprecedented performance as you cook and entertain. Because details matter to you, Jenn-Air brand will never settle for the ordinary when the extraordinary can be achieved.

FLOATING GLASS

Contemporary Classic

Jenn-Air® appliances featured in the Floating Glass series bring pristine surfaces and elegant electronic controls together for a flawless look that will satisfy the most discriminating tastes.

The signature elements include high-gloss glass panels, which accent surrounding cabinetry and provide a clean, contemporary alternative to stainless steel. Other design highlights include a subtle badge with embossed metallic lettering and slightly curved, color-coordinated handles.

Coffee

Professional Design for the Highest Quality

Enjoy cafe-style coffee – with or without a shot or two of espresso – in the convenience of your home. Brew robust coffees, incredible cappuccinos or rich lattes on demand, suited to your personal taste. The Jenn-Air™ built-in coffee system does it all. This system stores your coffee beans, grinding the perfect amount for immediate brewing and enjoyment – at peak, full-bodied flavor. And unlike other built-in systems, ours is designed for effortless cleaning so you won't think twice about brewing another cup.

Coffee | The Perfect Brew

Two boilers maintain ideal temperature in the optimal brewing range to prevent scorching of fine espressos and coffees. The built-in coffee system's 11.7 BARs of consistent brewing pressure enable excellent flavor extraction, while the dual-dispensing spouts allow for either one- or two-cup brewing.

Start with the Perfect Grind

The grinder's professional-style, metal construction helps ensure reliability, optimal grinding performance and exceptional flavor, no matter the coffeehouse-style beverage. The integrated whole-bean, conical coffee grinder has 13 settings, calibrated from fine to coarse for perfect brewing results.

One-Touch Cappuccinos

One-touch brewing of either one or two coffees, milk-based espresso drinks and even hot water dispensing serves up a wide variety of beverages, as though you had your own barista. The frothing system's integrated milk container adjusts to create the perfect mix of foam and beverage.

Ease-of-Cleaning in Every Detail

Relax and enjoy your coffee. You won't find a built-in coffee system that's easier to clean. The frothing system has one-button steam cleaning, the brewing unit is easily removed and coffee grounds are compressed into small pucks for convenient disposal. You'll appreciate the difference details make.

Cooking | Appetite for the Extraordinary

Unleash your culinary creativity. Jenn-Air® cooking appliances include our unparalleled wall ovens featuring the V2™ vertical dual-fan convection system, a steam and convection wall oven that lets you achieve incredible results, and the breathtaking Accolade® downdraft ventilation system with an elegantly curved design. Experience the exceptional precision of our cooktops and ranges highlighted by our highly effective JX3™ downdraft cooktops. Plus, our versatile warming drawers and stylish microwave ovens with extensive cooking modes will heighten your cooking flexibility.

Wall Ovens | Unparalleled Performance

Your kitchen transformation begins with ground-breaking wall ovens that feature incomparable performance and a flush-to-cabinet design. Single, double and combination ovens are available in 30- or 27-inch widths with one of two convection cooking systems – the V2™ vertical dual-fan convection system or the MultiMode® convection system. Select models feature WiFi connectivity that allows unprecedented connectivity through a fully functional app for iOS and Android devices.

2 Dual-Speed Fans, Custom Settings Yield Great Results

Jenn-Air® wall ovens with the V2™ vertical dual-fan convection system combine innovative cooking features and technology to help achieve consistently ideal results. A 2,800-watt bake element, 4,000-watt broil element, two convection elements totalling 6,800 watts and two dual-speed fans combine to provide exceptional results.

MultiMode® Convection Brings Confidence to Baking and Roasting

All of our wall ovens represent a legacy of inspiration, and models with MultiMode® convection are no exception. Outstanding performance features range from six convection modes that provide even baking and roasting on multiple racks to Auto Convection Conversion which gives you the confidence to cook with convection. A 4.3-inch full color menu-driven LCD display guides you effortlessly through the oven's modes and functions.

Taking the Jenn-Air® Culinary Center to the Next Level

With a sharp, 7-inch touch-anywhere LCD display, fully-integrated, intuitive controls and selections, the next-generation Jenn-Air® Culinary Center expands upon the brilliance of the original. Full-color imagery of foods, doneness levels and cookware types helps guide your oven settings, and the advanced cooking capabilities of the Culinary Center take into account a wide range of factors to optimize the oven cycle and produce the perfect results you desire, every time.

Performance Highlighted by DuraFinish™ Protection

Recognizable the instant the oven door is opened, the stainless steel convection tower is coated with DuraFinish™ Protection. This specialized finish brilliantly highlights the exceptional performance of our wall ovens with the V2™ vertical dual-fan convection system, helping protect the convection tower from staining, scratching and discoloration from high-temperature cooking. Spills or baked-on foods wipe off easily with a damp cloth, making cleaning virtually effortless.

Steam and Convection Wall Oven

Extraordinary Results for Exceptional Entertaining

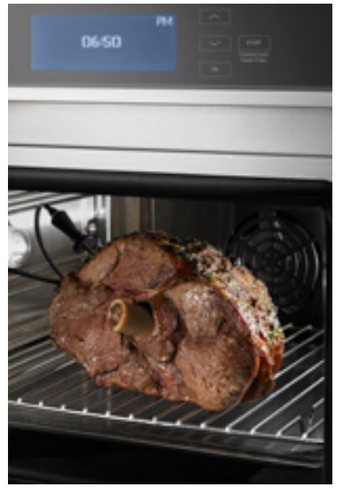
Achieve culinary results you never thought possible. With steam and convection cooking at your fingertips, you can prepare virtually every type of food with flavors, appearances and textures that are nothing short of extraordinary. And because steam cooking enhances the nutrient retention in foods like vegetables and seafood, your meals will not only be distinctively flavorful, they'll also be exceptionally healthy. Once you experience this remarkable oven, you'll never entertain without it.

68 Ways to Create a Gourmet Dinner

Confidently create meals of distinction without the guesswork. Simply select the type of food you want to cook by using Preset Foods mode, and the oven provides all the cooking settings for you. You can further adjust these settings to suit your preference. With 68 different preset foods, virtually any kind of meal can be cooked to perfection.

Enhancing Flavors Gently and Powerfully

Your entertaining style calls for enticing aromas, exceptional flavors and food that's as visually attractive as it is delicious. When you cook with steam and convection, your food's flavors, nutrients and textures are preserved – letting you serve tender meats and poultry, colorful vegetables and restaurant-style breads.



Incredible Versatility, Endless Possibilities

Steam, convection heat, or a combination of the two let you cook almost every type of food imaginable. Prepare meats and poultry, seafood, vegetables, breads, side dishes such as potatoes, pastas, rice, desserts like fruit compotes, crème brulee, apple pies, and much more. Your culinary possibilities are endless.

Multi-Rack Cooking

This oven comes with all the racks needed to cook a wide variety of foods: a steam tray, a roasting rack and a baking/drip tray. Plus, with steam, you can cook two or more types of foods at once without the flavors of one food transferring to another.

Water Reservoir

With this removable reservoir, supplying your oven's steam generator with water couldn't be easier. Rather than plumbing the oven, simply fill the reservoir with tap water, place it back into its compartment, and close the oven door.

Getting Started with Steam

Cooking with steam is a technology that will be new to most consumers. Our iBook, ENTERTAIN: Cooking with Steam and Convection! is an ideal resource for discovering the potential of this amazing appliance. You can download a free copy at the iBookstore.

Pro-Style® Rangetops | The Height of Gourmet Potential, the Peak of Performance

Bring bold, commercial styling and exceptional performance into your kitchen with Pro-Style® rangetops. Four models are available in the most common 48-, 36- or 30-inch sizes. Each rangetop offers unique features, including an electric griddle.

Power to Boil Quickly, Precision to Melt Gently

Jenn-Air® Pro-Style® rangetops offer great variety and versatility with either four or six burners. Each model features one or two 20,000 BTU Dual-Stacked PowerBurners which provide the high heat needed for cooking methods such as flash frying and wok cooking. 15,000 BTU burners meet the demands of everyday cooking, and for delicate tasks like melting chocolate, a 5,000 BTU simmer burner provides even, low-output heat that prevents scorching and reduces to as low as 500 BTUs.

Enjoy the Elements of a Professional Kitchen

We created our Pro-Style® rangetops to meet the demands of gourmet cooks seeking appliances similar to those in restaurant kitchens. Select models feature an even-heating electric griddle which gives you the flexibility to expand your repertoire of cooking techniques. Electronic ignition and Flame-Sensing™ re-ignition ensure a continuous flame that re-ignites automatically if blown out – even at the lowest setting.

Professional Style, Premium Function

Ceramic-coated cast iron grates form a continuous surface over our high-powered rangetops, hold cookware securely and allow easy transfer between burners of different outputs. The heavy-gauge cast iron grates give our rangetops a solid, distinctly professional appearance, complementing the powerful burners and Pro-Style® controls, making our rangetops an attractive option.

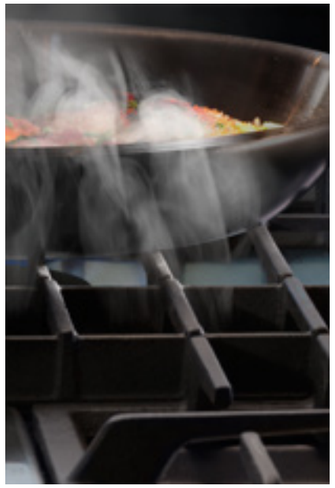
Cooktops | Fine-Tuned Innovation

Exquisite Jenn-Air® cooktops are highighted by our revolutionary JX3™ downdraft cooktops that unite precision control with exceptional styling. Stainless steel gas cooktops have an extremely low-profile design that allows a near-flush installation, and gas-on-glass models that provide additional design options. Induction cooktops offer a new level of cooking performance and a fresh face of refinement for the kitchen. Stylish electric models feature Triple-Choice™ and Dual-Choice™ elements that provide the versatility of multiple elements in one location.



Revolutionary JX3™ Downdraft Cooktops Offer Design Freedom

Jenn-Air brand has been at the forefront of innovation since introducing cooktops with downdraft ventilation in the 1960s. Instead of requiring an overhead hood, downdraft cooktops capture smoke, steam and odors at the cooking surface. JX3™ downdraft cooktops are optimized to offer the ideal balance of cooking and ventilation performance. These cooktops also give you more design freedom with an exclusive duct-free kit accessory that allows installation in any home – even a high-rise or condominium.

Gas-on-Glass Cooktops Expand Design Options

If you prefer the performance of gas, but want to expand your design options, the Jenn-Air brand now offers two 5-burner cooktop options with attractive black glass surfaces and Euro-Style barrel knobs. These models give you the power of an 18,000 BTU Dual-Stacked PowerBurner for high-heat cooking techniques and a 6,000 BTU simmer burner that provides optimal heating for simmering sauces.

Induction Cooktops Deliver the Best of Both Worlds

Our induction cooktops feature exceptional power and superb responsiveness, delivering fast and consistent results. Induction cooktops cook like gas, look like electric and outperform both. With cooking power that exceeds many commercial-style gas cooktops, induction cooktops turn cookware into the heat source, so little heating power is wasted. Temperature control is so precise you'll love the consistent, quality results.

Duct-Free Kit

Imagine a kitchen without boundaries. With the optional duct-free kit, our JX3™ gas and electric downdraft cooktops can be installed in any home – even a high-rise or condominium – without requiring a remodel.

Induction Technology

Jenn-Air® induction. Cooks like gas, looks like electric, outperforms both. Heat created directly in the cookware makes it the heat source which, in turn, cooks the food. And, with the touch of a button, the Sensor Boil feature will bring even large stockpots quickly to a boil.

Low Profile Design

Nearly flush with the countertop, Jenn-Air® stainless steel gas cooktops provide an integrated transition from countertop to the cooktop with an exceedingly low profile of nearly 3 mm. The minimal look has the maximum impact with robust, continuous grates, slightly elevated for optimal cooking efficiency and pan stability. The clean lines of this seamless look complement any kitchen décor.

Find Your Perfect Ventilation Match

Jenn-Air® ventilation systems remove steam, smoke and odors generated by cooking processes to help ensure a fresh, clean kitchen before dinner is served. See pages 114-117 to find a system that fits your cooking surface.

Pro-Style® Ranges | Showcase Your Culinary Expertise

Pro-Style® ranges give you versatile performance and robust commercial styling in a variety of configurations. Choose from three different sizes of dual-fuel, gas, or LP ranges, all of which showcase professional power and a convection system that helps you express your culinary creativity.

A Bold Range of Versatility and Precision

Pro-Style® ranges give you more control over everything you want to cook. High-output burners on the cooking surface give you the power needed to bring water quickly to a boil or for temperature-sensitive techniques such as searing and flash frying. The convection system circulates heat throughout the entire oven cavity for even baking and tender roasting. Achieving excellent results is simple – with the industry's first full color LCD display on a range, you can use advanced technology to touch anywhere on the screen and operate oven functions with unrivaled usability.

Cooking Surface Configuration Options

Jenn-Air® Pro-Style® ranges give you variations on the cooking surface that include either six or four burners. Every Pro-Style® range also features at least one Dual-Stacked PowerBurner and a simmer burner that turns down to an ultra-low temperature for melting delicate ingredients like chocolate and butter. If you tend to use a variety of cooking techniques, you may prefer a model with a high-performance griddle that provides even heat distribution for precise results.

Dual-Fan MultiMode® for True Convection

The convection system found on all Pro-Style® ranges provides accurate and consistent temperature management to help you create dishes with excellent results. Two fans disburse heated air throughout the entire oven cavity for the most even coverage on every rack. Dual-fuel ranges offer six convection modes while gas ranges offer five, including Convect Bake for even baking on multiple racks and Convect Roast for moist, tender roasted meats or vegetables.

Industry's First Full Color LCD Display on a Range

Get the most out of all the oven's functions. The 7-inch full color LCD display's advanced technology allows you to touch anywhere on the display to control virtually all oven settings. Four key menus are precisely organized on each screen for unrivaled usability. Slider technology allows precision temperature adjustment with a swipe of the finger.

Dual-Stacked PowerBurners

Each PowerBurner features two burners stacked in one location on the cooking surface with a maximum output of 20,000 BTUs (natural gas models) or 15,500 BTUs (LP models) providing the power for high-temperature cooking techniques such as wok cooking and flash frying.

Ranges | Rewarding Creativity with Exceptional Choices

Offering a wide range of options, Jenn-Air® ranges support your creativity and consistently provide exceptional results. Our full-depth ranges fit a standard cutout while providing a built-in, custom look. A variety of high-performance cooking options with all fuel types combined with a baking drawer and a true convection oven make these ranges perfect for entertaining. Select ranges feature our original groundbreaking innovation – the downdraft ventilation system – that eliminates the need for an overhead ventilation hood.

Broadened Capacity, Convection Cooking

The addition of a baking drawer to select Jenn-Air® ranges raises the total baking capacity, providing the freedom to prepare a wide variety of dishes at once while still performing specialty tasks like heating plates and keeping completed dishes warm. The true convection oven ensures even heat throughout the oven cavity by adding a heat element to the convection fan, and Auto Convection Conversion takes the guesswork out of cooking times and temperatures.

Options Tailored to Your Cooking Style

Covering all fuel types – dual-fuel, gas, induction and radiant electric – Jenn-Air® ranges offer the versatility to match any cooking style. Whether it's the instant power and control of gas or the exceptional efficiency and versatility of induction, there is a Jenn-Air® range with the fuel type to provide you with what best fits your cooking needs. Downdraft ranges expand your design options by allowing installation in open concept kitchens because they don't require a separate overhead hood.

Bold Style with a Beautiful Fit

Achieve a built-in look without replacing cabinetry with Jenn-Air® full-depth ranges, designed to fit in a standard range opening. These ranges easily install without a back bridge countertop piece to attractively provide a custom, polished look.

Convertible to Duct-Free Ventilation

The duct-free filter kit efficiently captures smoke, grease and moisture, resulting in a consistently fresh kitchen with an open, inviting design. See page 83 for more details.

DuraFinish™ Protection

Jenn-Air® dual-fuel and gas full-depth ranges feature DuraFinish™ Protection. This scratch- and stain-resistant protection keeps the cooktop looking like new by also resisting yellowing that high-heat cooking can cause over time.

Over-the-Range Ventilation and Microwave Cooking

Whisk smoke, steam and odors out of your kitchen efficiently with a Jenn-Air® over-the-range microwave oven. Our microwave ovens cook a variety of foods with outstanding results and feature extensive modes and controls. See page 90 for more details.

BTU-Watt Comparison Tool

For customers who may be reluctant to sacrifice the power of gas for an electric or induction cooktop, Jenn-Air brand offers a free BTU-Watt comparison tool. This app, which is available for iOS devices, displays how the power of our induction and electric elements compares to gas burners.

Microwave Ovens | Versatility and Performance that Transcends Expectations

Jenn-Air® microwave ovens are as versatile as traditional ovens. A range of cooking modes provides outstanding results – from microwave & convection combination cooking to auto sensor steam cook. The full color, menu-driven LCD display will guide you through modes and functions. With intuitive navigation, controls show relevant selections. With an assortment of styles, including built-in, drawer design, countertop and over-the-range microwave ovens, you can find one that fits perfectly into your kitchen.

Convection Cooking in a Microwave Oven

Many Jenn-Air® microwave ovens offer convection cooking modes. A model with Speed-Cook combines the speed of microwave cooking with the convection system and broil element to cook food up to three times faster than traditional cooking methods. Microwave & convection combination cooking gives you the flexibility to cook a variety of preprogrammed foods with results you would expect from a traditional oven.

Drawer Design for Convenient Cooking

This microwave oven with drawer design leaves valuable counter space uncluttered with under counter or in-wall installation options that are ideal for an open kitchen design. The drawer opens and closes automatically with the touch of a button, and its top access allows you to check or stir food without removing the dish. For added flexibility, a Keep-Warm™ option allows the microwave oven to operate similar to a warming drawer, keeping finished menu items warm until serving time.

Smart Cooking and Ventilation

Experience smart design that conveniently locates electronic touch controls on over-the-range microwave ovens. The concealed pocket handle easily opens the door to a stainless steel cavity lit by halogen theater lighting.* Using multiple fan speeds and a 300 CFM blower, a built-in ventilation system captures smoke, steam and odors while halogen lights illuminate the cooktop surface. To maintain a fresher kitchen environment, the ventilation system turns on automatically when it senses heat rising from the cooktop below.

Warming Drawers | An Enticing Choice for Entertaining

Jenn-Air® warming drawers deliver incredible flexibility in the kitchen or any room of the home – even outdoors. An essential for entertaining, our warming drawers keep food warm at a wide range of temperatures, while humidity settings let moist foods stay moist and crisp foods crisp. In addition, you can warm plates, proof bread or even slow roast.

Beyond Warming: Slow Roasting

Enjoy the versatility of the Slow Roast function which allows you to roast foods such as beef, pork and poultry over a long period of time in the warming drawer with tender, moist results. It cooks and roasts foods slowly at a low temperature and features two settings, resulting in flexible slow roast options.

Moist to Crispy, Perfect Results

Two humidity settings allow you to precisely control the moistness or crispness of food. The control allows you to open or close the vent slots in the door. The Moist setting holds moisture in the drawer to keep food soft, while the Dry setting allows steam and moisture to escape from the drawer to keep food crispy.

Ideal Setting for Perfect Proofing

This specialized warming drawer function provides a controlled environment for proofing bread with excellent results. It prepares dough for baking by activating the yeast and allowing bread and rolls to rise at a low temperature.

Ventilation | Clear the Air. Boldly. Beautifully.

To maintain a fresh, clean kitchen environment, Jenn-Air® ventilation systems target smoke, steam, heat and odors generated during the cooking process. Choose from a downdraft model that retracts into the countertop when not in use, such as the strikingly beautiful Accolade® downdraft ventilation system with an elegant curved design. We also offer sophisticated commercial-style hoods, classic wall- or island-mount hoods, and innovative perimetric hoods. Most styles are available in our signature kitchen suites to create the look you desire.

Pro-Style™ Hoods Manage Power

These ventilation solutions are the perfect complement to the power and versatility of our other commercial-style cooking appliances. Jenn-Air® Pro-Style™ hoods have a range of 600 to 1,200 CFM and are capable of handling the requirements of commercial-style cooking surfaces. Select models feature the added benefit of food warming lamps to keep cooked food warm.

Perimetric Ventilation Makes Power Beautiful

The slim profile and sophisticated design of perimetric ventilation hoods not only adds a touch of modern elegance to any kitchen, it also makes these canopy hoods particularly effective at extracting cooking vapors from the kitchen. Air is drawn through thin slots near the hood's perimeter, increasing the amount captured and reducing sound, making these canopy hoods exceptionally quiet.

Downdraft Ventilation Retracts with Elegance

In addition to traditional ventilation hoods, Jenn-Air brand offers downdraft ventilation systems that are ideal for kitchens that don't easily accommodate an overhead vent, such as where a cooktop is installed in a kitchen island or peninsula. To effectively capture smoke, steam, heat and cooking odors from all sizes of cookware, the Accolade® downdraft ventilation system rises 19 inches above the countertop and the telescoping downdraft vent rises 14 inches. And when they're not being used, they elegantly retract back into the countertop to maintain open sight lines throughout your kitchen and adjoining living spaces.

Perimetric Extraction

This sophisticated design is not only attractive, it is the secret behind the ventilation system's exceptional performance and quiet operation. Cooking vapors are efficiently captured by drawing air through thin slots, speeding the air and improving ventilation performance.

Sound Silencing System

Innovative technology brings a distinct level of silence to premium hoods while maintaining high performance. The Jenn-Air® sound silencing system found on select hoods optimizes air flow, increasing the amount of air taken in and decreasing the noise emitted. You'll never have to worry about disrupting pre-dinner conversation with this noise-reduction system.

Refrigeration | Fresh-Thinking Refrigeration

Elevated style and performance are hallmarks of Jenn-Air® refrigerators, and we've gone one step further with the exclusive Obsidian interior on our built-in refrigerators. In addition to keeping food and ingredients in ideal conditions, Jenn-Air® built-in refrigerators feature the industry's most fully integrated and flush configurations*. Our freestanding refrigerators give you the choice of counter- or standard-depth designs, and Jenn-Air brand supports your love of entertaining with a collection of fully flush, under counter models that provide convenient storage options.

* Based on refrigerator/freezer configurations.

Enjoy Fully Integrated and Flush Design

Jenn-Air® fully integrated built-in refrigerators accept custom overlay panels that help them to virtually disappear into a custom 25-inch deep cutout. You can choose to add a coordinating stainless panel kit or install custom panels to match your cabinetry. Side-by-side models are available in 48- and 42-inch widths. Other fully integrated and flush configurations include 42- and 36-inch French door models and 36-inch bottom-freezer refrigerators with a right- or left-hand door swing.

Truly Indispensable Built-In Refrigerators

Our 48- and 42-inch wide side-by-side built-in refrigerators feature an integrated ice-and-water dispenser that offers the choice of cubed or crushed ice. Capacitive touch controls enhance the sleek exterior and showcase easy-to-use, advanced performance.

Ideal Conditions for Each Compartment

Built-in French door and bottom-freezer refrigerators feature our Twin Fresh™ climate control system. Using sequential dual evaporators and a single variable speed compressor, the system creates cool, humid air in the refrigerator and produces dry, frigid air in the freezer with no transfer of air between the two compartments.

Built-In Refrigerators | Performance that Stands Out While Blending In Beautifully

Jenn-Air® built-in refrigerators have exterior design options that blend in beautifully or become a striking focal point in your kitchen. And with the Obsidian interior, every model showcases an industry-exclusive feature that adds an elegant look to a luxury home. Additional features like multi-point LED lighting and improved sound performance allow these built-in refrigerators to create a sensorial experience that has no equal.

Freestanding Refrigerators

Enduring Style, Refreshing Choices

Select Jenn-Air® freestanding refrigerators feature an appealing counter-depth design, meaning only the doors and handles will extend beyond the base cabinet, creating a more integrated design that's ideal when you're entertaining in the kitchen and need room for guests to move. Choose between 69- or 72-inch high models. The 72-inch refrigerators fill possible gaps underneath overhead cabinets. Jenn-Air® freestanding refrigerators include French door and side-by-side configurations.

French Doors Reveal Expansive Capacity

French door refrigerators provide ample fresh food storage space wide enough to fit large platters. Jenn-Air® French door refrigerators feature both a counter- and standard-depth design, making them suitable for many kitchen configurations.

Everything You Need, Side by Side

Side-by-side refrigerators remain the choice for many homeowners. You get equal access to the refrigerator and freezer. Dedicated crisper drawers and deli drawers allow for specialized storage of sensitive ingredients. All Jenn-Air® side-by-side refrigerators feature a counter-depth design with an external ice-and-water dispenser.

Two Ways to Dispense Cool, Filtered Water

Select French door refrigerators feature an exterior dispenser, which allows you to get one of the most preferred features of a side-by-side refrigerator. If you desire an uninterrupted exterior, you can still enjoy filtered water from an internal dispenser in certain models.

Door-Mounted Ice Dispenser with Removable Bin

The door-mounted ice dispenser is an ideal feature for those who love to entertain. Its in-the-door location gives you easy access to large quantities of fresh, filtered ice, while increasing usable storage space. The removable bin features a handle and flat bottom, making it easy to serve guests.

Single-Paddle Cubed/Crushed Ice & Water Dispenser

Capacitive-touch controls make it easy to select cubed ice, crushed ice or chilled water. The Measured Fill feature dispenses water in precise amounts of ounces, cups or liters. And the dispenser has the same ramp-up lighting found inside the refrigerator.

* For cabinet color, see page 141. ** Depth includes handles.

Under Counter Refrigeration | Understated Elegance, Built-In Convenience

Ideal in an island, but perfect anywhere, Jenn-Air® under counter appliances provide close-at-hand, convenient refrigeration that's great at the heart of a kitchen prep area or near entertaining space. Your kitchen island will stand out because Jenn-Air® under counter refrigeration blends in with a fully flush, built-in design, fitting seamlessly with adjacent cabinetry. Horizontal handles create visual alignment and integration in any built-in suite.

Top-Drawer Performance

With a design that fits into standard cabinetry, double drawers are a great supplement to a primary refrigerator and can replace a full-size refrigerator in small households. With space that can be efficiently organized, double drawers – configured as either two refrigerators or a refrigerator/freezer – open up your kitchen and keep ingredients close at hand for a designated prep area. They're also convenient in entertainment areas, where the refrigerator/freezer can provide a steady supply of fresh, filtered ice.

Enjoy Elegant Looks and Chilling Grace

Jenn-Air® under counter appliances help manage specialty storage needs with elegance and grace. The wine cellar's extendable racks with natural, beechwood tines gently cradle and chill up to 46 bottles. The beverage center accommodates up to 14 wine bottles, along with beverages, hors d'oeuvres and other ingredients. Under counter refrigerators can be a stand-alone solution in a home office or wet bar, or a secondary refrigeration option in the kitchen. A glass door model matches the wine cellar and beverage center. Make a distinctive statement by combining the three as part of an integrated, built-in suite.

A Fresh, Clear Choice for Entertaining Guests

With the Max Ice option, the Jenn-Air® ice machine can produce up to 50 pounds of ice in a 24-hour period.* A 25-pound storage capacity means you'll always have a continuous supply of ice cubes on hand. Your guests will appreciate the fresh, clear ice thanks to a replaceable water filter that reduces chlorine taste and odor and scale buildup.

* With the Max Ice option selected.

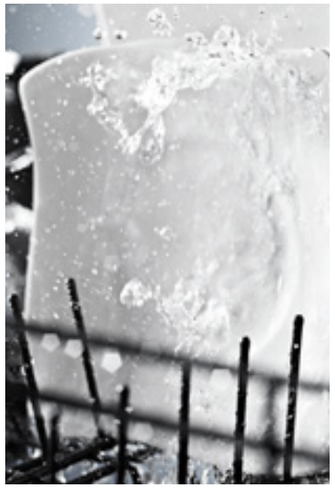
Dishwashers | Make Parties More Sparkling

A dishwasher not only has to look beautiful in your kitchen; it needs to clean beautifully as well. So it's important to consider the cleaning and drying performance of a dishwasher and how it works – for different types of soils and different types of dishware. Jenn-Air® dishwashers feature the TriFecta™ wash system, providing exceptional cleaning performance, quiet operation and improved energy efficiency. Most importantly, our dishwashers get every load sparkling clean, eliminating even the toughest messes.

Dishwashers | Expect Brilliant Results

Jenn-Air® dishwashers offer an innovative wash system with versatile cycles and options that take cleaning to a whole new level. Our improved sound-silencing system allows you to run the dishwasher without disturbing daily activities or interrupting a dinner party. Premium, capacitive touch controls are activated by your gentle touch, look elegant and contemporary, and allow for easy cleaning. Our flush dishwasher, with built-in water softener, delivers perfect alignment with adjacent cabinetry, even frameless, European-style cabinets with depths as shallow as 24 inches.

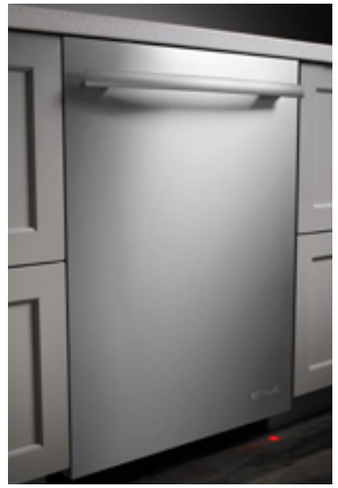


Versatile Performance in Cleaning Dishware

The TriFecta™ wash system conserves water and concentrates cleaning power by alternating washing action between the top and bottom rack. Using a variable-speed motor and pressurized wash arms, it delivers improved cleaning performance and energy efficiency. Three-stage filtration helps optimize water flow while minimizing the amount of food soils re-deposited on dishes for immaculate cleaning. Sensor Wash, the most advanced and versatile cycle on Jenn-Air® dishwashers, senses soil amount, toughness and load size, and then adjusts the cycle for optimal cleaning. Select models include a Hi-Temp Wash option that enhances cleaning performance, particularly with tough, baked-on food, by raising the main wash temperature.

Active Drying for Better Results

Select Jenn-Air® dishwashers feature one of two active drying methods: heated drying and heated drying with fan-assisted ventilation, known as Precision Dry® and Precision Dry® Plus. These premium options combine the recessed heating element with a drying cycle that is automatically and precisely adjusted to help ensure dishes are dry at the end of the cycle. You can also conserve energy by turning off these drying options for condensation drying, letting water naturally evaporate from your dishes.



Designed for Seamless Elegance

Achieve perfect alignment with adjacent cabinetry with depths as shallow as 24 inches by installing a full-size, Jenn-Air® flush dishwasher JDB9600CW – even in frameless, European-style cabinets. With a built-in water softener, the dishwasher conditions water to enhance cleaning performance, helps protect the dishwasher from limescale, and reduces spots and water marks on dishes and glasses.

SteamFinish Option

The SteamFinish option, featured on the JDB9800CW and JDB9200CW, helps avoid the water spot faux pas. A mist of steam before the final rinse helps enhance shine and finish on glassware, while reducing water spots. The SteamFinish option provides outstanding results for tumblers, glass dishware and stemware during Sensor Wash, Cookware/ Bakeware and Normal Tableware cycles.

Compactors | Unparalleled Elegance and Ease

Decrease your trash volume and your trips to the trash bin with a stylish Jenn-Air® compactor. You'll especially appreciate your compactor after dinner parties, holiday get-togethers and any event where there's an increased amount of discarded items. With several style options available, these discreet compactors can match your other appliances or blend perfectly with your surrounding cabinetry. And with such an attractive exterior, no one would know that a compactor sits hidden behind it. Our compactors also improve the appearance outside your home by reducing the amount of trash in your outdoor receptacles on collection day.

Compactors | Elegant, Discreet Cleanup

Beautifully complement the décor of your kitchen. Jenn-Air® luxury compactors are available in a variety of style options. Choose from the attractive Euro-Style Stainless model with an elegantly-curved handle, or a Pro-Style® Stainless panel kit with a diamond-etched handle. A Custom Overlay Design option is also available, which lets your compactor blend with your cabinetry for a seamless, integrated look.

2,300 Pounds of Cleanup Power

How can you make a night of entertaining a little easier? Let a Jenn-Air® compactor assist your cleanup efforts by reducing your trash volume up to 80 percent.* When you select the Compress option, 2,300 pounds of continuous pressure is applied to the contents, discreetly eliminating messes and ensuring contents stay compressed.

* When Compress option is selected.

Fan with Charcoal Filter Keeps Kitchens Fresh

Because you and your guests expect a fresh and clean kitchen environment, all Jenn-Air® compactors feature an odor-control fan and charcoal filter to help remove any stubborn, unwanted odors in the air.

Pedal-Assisted Convenience

Your hands are full during dinner-party cleanup, so your Jenn-Air® compactor gives you a full-width foot pedal that lets you open and start it quickly and easily with minimal use of your hands.

IMPORTANT: Dimensional specifications are provided for planning purposes only. **Do not make any cutouts based on this information.** Refer to installation instructions packaged with product *before* selecting cabinetry, making cutouts or beginning installation. All Jenn-Air® appliances are appropriately UL, CUL or CSA approved.

Coffee

C

Conical Whole-Bean Coffee Grinder
An integrated, automatic, metal grinder on the built-in coffee system featuring 13 levels, from fine to coarse, and a tubeless system to enable at-home brewing of fresh-ground coffee.

D

Descaling Mode
A simple-to-use maintenance mode that removes limescale deposits from inside the built-in coffee system's boiler and water lines to help ensure optimum performance and taste.

Dual Dispensing Spouts
A two-cup dispenser on the built-in coffee system that can be lowered or raised to create the desired level of coffee creaminess while preparing two cups in a single brewing.

F

Frothing System with Integrated Milk Container
A dishwasher-safe milk container for the built-in coffee system that delivers froth levels from light for caffe lattes to thick for cappuccinos for one-touch preparation of coffeehouse-style beverages. All parts that come into contact with milk are steam-cleaned with its cleaning function.

Cooking

A

Auto Convection Conversion
Automatically converts conventional cook time and/or temperature from any recipe to the appropriate convection settings, taking the guesswork out of convection cooking for consistent, effortless results.

Auto Defrost
Simplifies the defrosting process by automatically setting the defrosting time and power levels based on type and weight of food.

Auto Non-Sensored Microwave Cooking
Selectable microwave oven categories that include foods with preprogrammed cook times and power levels.

Auto On Feature
Protects against high temperatures by increasing the fan speed of the over-the-range microwave oven to its maximum setting when an excessive amount of heat is detected. When the temperature subsides, the fan returns to the previously selected speed (or off).

Auto Sensor Microwave Cooking/Reheat
An internal sensor in the microwave oven detects humidity coming from the food and programs the remaining cooking time.

Auto Sensor Steam Cook
A cooking cycle that uses a sensor to provide precise steaming based on the food type selected.

B

Baking/Drip Tray
A solid tray used for baking and for preventing juices from dripping onto the steam and convection oven floor, helping to ensure simple cleanup.

Baking Rack
A rack on combination microwave/wall ovens that allows for baking and roasting in the microwave oven.

Bread Proofing Function
A warming drawer function that activates yeast, allowing it to rise at a low temperature.

BTU
British thermal unit. A measurement of the amount of heat needed to raise one pound of water one degree Fahrenheit. Higher BTU burners reach higher temperatures.

Built-in Oven Compatible
Designates a cooktop that can be installed over a single wall oven, offering additional design flexibility.

C

CFM
Cubic feet per minute. The higher the CFM rating, the more air movement the ventilation hood offers and the quicker it cleans smoke, grease and odors out of the air.

Charcoal Filter
A type of filter used in recirculating ventilation applications that helps remove smoke, grease and odors before air returns to the kitchen.

Chef's Light
This light, centered above the door in the wall oven cavity, works together with the two other halogen lamps to reduce shadows in the oven cavity, making it easier to view food as it cooks.

Chimney Cover
A metal covering for exposed ductwork. Used for vents where no cabinet exists between the hood and ceiling.

Chimney Extension Kit
Provides the ability to install a vent hood in areas with high ceilings while maintaining the recommended distance above the cooking surface to ensure efficient ventilation.

Continuous Grates
Grates that span the entire cooking surface, making it easy to slide cookware across burners without lifting.

Convection
A method of cooking in a gas or electric oven where a fan continuously circulates heated air to cook food faster and more evenly.

Convection & Microwave Combination Cooking
To optimize cooking results, this feature combines the power of a true convection element and fan with microwave energy.

Convection Rack
A microwave oven rack that allows air circulation during convection cooking cycles.

Convertible to LP
Rangetops, cooktops and ranges are manufactured for use with natural gas. However, they may be converted for use with LP. Select Pro-Style® ranges are manufactured for use with LP.

Convertible to Natural Gas
Select Pro-Style® ranges are manufactured for use with LP. However, they may be converted for use with natural gas.

Cook & Hold Option
Automatically adjusts the temperature to a Keep Warm™ setting for one hour after the preset cooking time has expired.

Crisp Pan
Works with microwave energy and the broil element to crisp and brown foods.

D

Descaling Mode
A steam and convection oven function that removes limescale deposits from inside the oven's boiler and water lines to help ensure optimum performance.

Downdraft Ventilation System
Developed and refined by Jenn-Air, a downdraft ventilation system utilizes proximity ventilation to capture smoke, steam and odors at the cooking surface, whisking them down and out before they can escape into the kitchen.

Drawer Design
A microwave oven that installs directly into under counter cabinetry, an ideal option for open kitchen designs and islands.

Dual-Choice™ Element
An electric element that features two element sizes in one position for greater cooking flexibility.

Dual-Fan MultiMode® True Convection System
A system that consists of a 2,800-watt (1,200 watts on gas ranges) oval heating element and two round fans that generate even air flow throughout the oven cavity, combining to create six different convection cooking modes.

Dual-Fuel Range
Combines the precise control of a gas cooking surface with an electric oven.

Dual-Speed Reverse Air Flow Fan
A fan that adjusts to a lower speed when the oven begins to cool for quieter operation.

Dual-Stacked PowerBurners
A combination of two individual burners stacked in one location on the cooking surface that delivers the power required for high-temperature cooking techniques such as wok cooking and flash frying.

Dual Zone Induction Element
An induction heating element that offers two element sizes in one position, providing the use of a single element for different cookware sizes.

Duct-Free HAPA Filter
Filter included with the duct-free kit that captures smoke, grease and moisture and allows air to travel through the filter without a loss of air efficiency. The filter also has a Timestrip® filter life indicator.

Duct-Free Kit
A kit that allows downdraft cooking products to be installed in any home, ideal for a high-rise or condominium.

Duct-Free Ventilation
A ventilation solution that does not require running ductwork for kitchens with installation restrictions or ducting limitations.

DuraFinish™ Protection
A protective finish on stainless steel cooktops and the convection tower on select wall ovens that helps prevent discoloration, scaling and staining, and is scratch-resistant.

E

Electronic Ignition
A method of ignition in which the gas is ignited at the burner port by an electric spark.

Extendable Roller Rack with Handle
A rack that features an easy-grip handle and ball-bearing rollers for smooth extension.

Exterior Venting
Ductwork in the ventilation system that extends through an outer wall or the roof of a home.

F

Flame-Sensing™ Re-ignition
Automatically detects if a burner's flames are blown out by a sudden draft and re-ignites them.

Flush-to-Cabinet Design
Appliances that install flush with surrounding cabinets for seamless integration into cabinetry.

4.3-Inch Full Color Menu-Driven LCD Display
A full color LCD display with menu-driven controls guides the user through each selection, making it easy to get the most out of all of the oven's functions.

Full and Center Broil Settings
Full and center settings deliver intense, concentrated broiling for large or small quantities.

Full Depth Range
Create the built-in look and feel of a slide-in range without adding additional trim pieces or risking damage to countertops.

Full-Extension Drawer with Roller Glides
Ball-bearing rollers allow the warming drawer to smoothly extend as far as the depth of the drawer.

H

Halogen Theater Lighting
Halogen lighting that gradually increases to full intensity, illuminating the oven cavity and maximizing shadows.

Hidden Bake Element
The bake element is hidden under the oven floor, providing a smooth surface and seamless design.

High Altitude Kit
Kits for LP and natural gas accommodate fuel needs at higher altitudes.

High-Luminosity Halogen Lights
Precisely positioned lights in the oven that provide best viewing of contents.

Hood Liner
A hidden ventilation system that is mounted to the inside of a custom-built vent covering.

Hot Surface Indicators
Light(s) positioned at the controls instantly show which element is still hot – even if the element has been turned off.

Humidity Slide Control
A warming drawer function that seals moisture into the drawer or lets moisture escape from the drawer in order to keep hot food soft or crispy.

I

Induction Technology
A cooking technology that uses electromagnetic energy to turn cookware into the heat source, providing instant heat and precise temperature control. Since the cookware becomes the heat source, the area around each element stays cool to the touch.

In-Wall Installation
An appliance that may be installed in a wall with or without a trim kit.

J

Jenn-Air® Culinary Center
Function that combines inputs to calibrate the oven to cook food for precise results. Full color pictures allow a choice of options specified to selected preferences.

continued next page…

JX3™ Downdraft Ventilation System with 3 Speeds
Developed and refined by Jenn-Air, the JX3™ downdraft ventilation system uses proximity ventilation to capture smoke, steam and odors at the cooking surface with 475 CFM (electric downdraft cooktops) or 425 CFM (gas downdraft cooktops), whisking them down and out for a fresher, cleaner kitchen. The system has been designed to provide optimal cooktop performance.

K

Keep Warm™ Function/Option
Holds temperatures at a low setting to keep finished menu items warm until they are ready to be served or while other items finish cooking.

L

Light-Assisted Menu-Driven Controls
Controls outside of the 4.3-inch full color menu-driven LCD display that light up or darken, depending on the relevant selections.

Low Profile Design
A sleek, stylish design alternative that is compatible with various kitchen styles and designs. When applied to vents, this design is unobtrusive and complements any décor.

M

Make-Up Air Kit
A kit that is used to recirculate and "make-up" for lost air due to exhaust systems.

Melt Function
Provides a low power level suitable for melting delicate ingredients without scorching.

Memory Programming
Program consecutive cooking cycles with different times and power levels without having to stop and reprogram the microwave oven during cooking.

Microwave & Convection Combination Cooking
Maximize the benefits of cooking with a microwave oven by utilizing microwave oven and wall oven combination techniques.

MultiMode® Convection System
The convection system, found on select ovens and ranges, featuring three radiant elements that combine to create multiple convection cooking modes.

MultiMode® Convection System with Convection Element
Found on select slide-in gas ranges, the convection system features a convection fan to circulate heated air over, under and around food for even cooking and browning.

My Creations
An oven function that combines up to three modes seamlessly, selecting the time and temperature for each mode. Settings can be saved and later deleted.

N

No Preheat Baking
A selectable mode that allows baking on a single rack without preheating the oven.

O

Offset Rack
A full-width rack that creates more space for cooking large dishes on the lower rack.

P

Pan Size Detection
An intuitive sensor-driven feature on induction cooktops that ensures an element will only activate when appropriately sized cookware is placed on it.

Performance Boost
A function on select induction cooktop elements that, when selected, allows the temperature to exceed the maximum heat setting for up to 10 minutes.

Perimetric Ventilation
Effectively captures cooking vapors by drawing air through a thin slot near the ventilation's perimeter, speeding the air, reducing sound and improving ventilation performance.

Plenum
Hidden beneath the air grill on a cooking surface, the plenum is the ventilation chamber where air is pulled through.

Popcorn Function
A sensored microwave oven function that determines when popcorn is finished popping.

Power Touch Open/Close
Microwave oven drawer opens and closes automatically with the touch of a button.

PowerBurner
A high-output burner that reaches at least 16,000 BTUs of power when at its ultra-high setting.

Precise Power® Function
A selectable, touch-control function on electric radiant cooktops that activates the maximum power level on any chosen element for tasks such as bringing water quickly to a boil. After 13 minutes, Precise Power® automatically reduces power to the level preset by the user. It can be used simultaneously on more than one element.

Proofing Function/Mode/Option
Allows foods containing yeast to rise at low temperatures for faster results than room temperature.

R

Radiant Elements
Fast-heating ribbon elements sealed underneath a glass-ceramic cooking surface.

Rapid Preheat
An oven function that decreases the time needed to preheat when using convection cooking modes with up to two oven racks.

Recirculation Kit/Recirculating Installation Option
This kit or option allows the ventilation system to pull air through a charcoal filter, eliminating impurities and returning fresh air to the kitchen.

Reversible Motor Box
A type of vent installation where the motor box can be positioned to face the front or back of cabinets to accommodate more installation options.

Rise (14-, 19-Inch Rise)
The height a downdraft ventilation system extends above the cooking surface to effectively capture smoke, steam and odors. Jenn-Air® ventilation systems feature a 14-inch rise or a 19-inch rise, depending on the model.

S

Sabbath Mode
A selectable oven function that bypasses the oven's automatic shutoff, allowing it to be used in homes that observe the Sabbath and other religious holidays.

Sealed Burners
Burners sealed into the cooking surface that prevent spills and drips from entering the burner box, making the surface easy to clean.

Sensor Temperature Control
A warming drawer function that monitors and regulates the interior temperature to keep it at the targeted set point.

7-Inch Full Color Touch-Anywhere LCD Display
A wall oven display that allows the user to touch anywhere on the display to select options that are organized precisely on each screen. The display intuitively presents information to make it easy to get the most out of all of the oven's functions.

Signature Convection Plate
A convection plate with vertical distribution channels that maximizes performance and air movement.

Simmer Burner/Function
A high-precision burner designed to simmer delicate sauces or melt sensitive ingredients without scorching or a cooktop function that automatically keeps cookware contents at just below boil.

6-Level Built-In Exterior Exhaust System
An exhaust system on over-the-range microwave ovens that includes four or five fan speed settings (depending on the model) and three different venting options.

600 CFM High-Performance Blower
A single centrifugal blower motor design that allows a ventilation system to operate at up to 600 CFM to quickly remove smoke, steam and odors.

Slow Roast Function
A warming drawer function that cooks and roasts slowly at a low temperature and features high and low settings, resulting in flexible slow roast options.

Smart Port Burner Design
Ports on cooking surface in the burner base that are cut at an upward angle to ensure more even heat distribution.

Soft, Auto-Close Door
Soft, auto-close technology lets the oven door close softly, quietly and securely.

Soften/Melt
A setting that allows the microwave to perform specialized cooking tasks such as softening ice cream or melting chocolate.

Sone
A unit of perceived loudness, where loudness is a subjective measure of sound pressure. In ventilation, one sone is roughly equivalent to the sound of a quietly running refrigerator.

Sound Silencing System
A system featuring long-life filters that optimize air flow for improved performance while bringing a new level of silence to decorative hoods.

Sous Vide Reheat Mode
A reheating mode that brings frozen sous vide foods back to their desired serving temperatures.

Speed-Cook
A comprehensive four-in-one cooking system that combines the speed of microwave energy with convection and broiling to cook oven-quality meals faster than traditional cooking methods.

Stainless Steel Convection Tower
A signature stainless steel convection tower maximizes performance and air movement and features DuraFinish™ protection.

Steam Cleaning Mode
A maintenance mode that softens hard food particles inside the oven, enabling cooks to easily wipe them away using water, mild detergent and a soft cloth.

Steam Mode
A fast cooking method that retains nutrients, flavors and moisture to bring out the best qualities in foods.

Steam Plus Convection Mode
An oven mode that uses both convection and steam to speed the cooking process, help food retain its own moisture and flavors, and produce a brown, crispy exterior.

Steam Reheat Mode
An oven mode that uses steam to warm foods evenly without drying them out.

Steam Tray (Perforated Pan)
A perforated tray ideal for cooking with steam and preparing foods like fish, vegetables and potatoes.

T

Telescoping Glide Rack
This extendable oven rack features a smoothly gliding roll-out extension, allowing you to easily position and remove dishes.

Temperature Probe
Allows for precise measurement of temperatures for meat, poultry and liquid-based casseroles.

Timed Blower Off Option
An option that gradually reduces blower speed in timed steps until completely off to help clear cooking vapors even after food has finished cooking.

Timed Vent and Light Auto Off
On select vents, this programmable function allows the vent fan to run for exactly 30 minutes or to run for 30 minutes after use, then automatically turn off. The timer can also program the light to turn on and off at specified times.

Triple-Choice™ Element
Offers the option of three sizes at one position for outstanding flexibility, matching the element to the cookware size for more efficient cooking.

1,200 CFM Dual High-Performance Blower
A dual centrifugal blower motor design that allows a ventilation system to operate at up to 1,200 CFM to meet the demand of high-output gas burners over 20,000 BTUs.

U

Ultra-High Output Burner
A high-output burner that reaches 15,000 to 20,000 BTUs of power at its ultra-high setting.

Ultra-Low Output Burner
A burner that reaches a maximum power level of 5,000 BTUs and reduces to a low setting to maintain the temperature needed for delicate items.

Under Counter Installation
A single oven that can be installed under the counter without cutting into the toe kick.

V

V2™ Vertical Dual-Fan Convection System
The convection system on Jenn-Air® wall ovens that features a 2,800-watt bake element, 4,000-watt broil element, two convection elements totaling 6,800 watts and two dual-speed fans that combine and adjust to selected mode, providing exceptional performance whether baking, roasting or broiling.

continued next page…

Cooking (continued)

Variable Temperature Broil
Oven mode designed for choosing Low or High broil, or a temperature between 300°F and 550°F to deliver more precise control.

W

Warm Zone Element
A 100-watt element that keeps finished menu items warm until they are ready to be served or while other items finish cooking.

WiFi Connectivity
Connecting with in-home WiFi, this wall oven is remote controllable through an app, available to download for use with either iOS or Android devices.

Y

Yogurt Mode
A preset oven mode used for making homemade yogurt from milk and a yogurt culture.

Refrigeration

A

Adjustable Elegance Shelving
Glass shelves, accented with brushed aluminum, make foods and beverages appear to float, allowing more light to fill the interior.

Adjustable Levelers
Independent, front-adjustable levelers make installation quick and easy.

Advanced Climate Control Drawer(s)
Dedicated storage drawer with electronic control which provides precise, independent temperature control for sensitive foods.

Auto Shut-Off Feature
The ice machine automatically stops producing ice cubes when the ice bin is full.

Automatic Adaptive Defrost
An energy-saving feature that automatically detects frost buildup and switches to defrost only when necessary.

Automatic Interior LED Marquee Lighting
Soft, marquee-style accent LED lighting extends along both sides of the wine cellar, illuminating the interior any time the door is opened or when the Display Lighting option is selected.

Automatic Pre-Emptive Defrost
This defrosting method monitors and remembers usage patterns for the refrigerator and performs the defrost function prior to heavy usage. It is highly energy efficient and helps protect against damaging temperature extremes.

B

Beverage Chiller™ Compartment
A door compartment on select Jenn-Air® French door refrigerators that helps preserve freshness by keeping frequently accessed beverages at a temperature up to four degrees colder than the rest of the refrigerator.

C

Capacitive Touch Controls
Light-assisted, touch-sensitive, menu-driven controls that guide you through each menu item, dimming portions that are not relevant to the highlighted selection.

Clean Cycle Indicator
Helps promote efficient operation by providing a visual indicator and alert chime when it's time to run the Clean cycle to reduce mineral scale buildup.

Clear Ice Production
An ice-production process that creates up to 50 pounds of clear ice in a 24-hour period for the under counter ice machine.

Coordinating Panel Kits
To complete a custom overlay design on fully integrated and flush refrigerators, Jenn-Air offers panel kits, sold separately. The kits are available in designs that match other Jenn-Air® appliances.

Counter-Depth Design
The depth of a refrigerator's cabinet is fully enclosed by kitchen cabinetry and aligned with the countertop depth, creating a better blend than standard-depth refrigerators for a more seamless look.

Custom Overlay Design
Custom overlay panel-ready appliances are delivered without panel(s) and handle(s) which must be ordered separately.

D

Display Lighting Option
A switchable option that enables interior lighting to remain on when the door is closed to display contents on under counter beverage centers and wine cellars.

Door-Mounted Ice Dispenser with Removable Bin
A removable ice bin, located in the freezer door, makes it easy to access ice. The bin is designed with a handle and flat base to accommodate serving.

E

ENERGY STAR® Qualified
Jenn-Air® refrigerators that meet ENERGY STAR® requirements exceed minimum federal energy standards, per ENERGY STAR® specifications.
®ENERGY STAR is a U.S. registered mark.

EveryDrop™ Filter by Whirlpool Water
Every Jenn-Air® refrigerator features a filter that is NSF certified* to reduce the most contaminants and filters approximately 200 gallons between filter changes.
*Based on NSF rated 6 month refrigerator filters flowing .50 gpm – .60 gpm.

ExpressFill™ Function
A one-button function on select models which allows simultaneous dispensing of ice and water and is ideal for containers with narrow openings.

F

Fully Extendable Soft, Auto-Close Drawers
An innovative design that allows under counter double drawers to extend smoothly and open completely. The soft, auto-close system ensures drawers close gently.

Fully Integrated and Flush Design
A built-in refrigerator design that blends seamlessly with adjacent cabinetry, creating an integrated appearance. Fully integrated means there are no hinges or trim pieces exposed, and flush means the refrigerator is even with adjacent cabinetry for an attractive appearance.

G

Glide-Out Drawer with SmoothClose™ Drawer Track System
A bottom-mount freezer drawer that provides smooth, easy operation – thanks to a sturdy design and precision ball bearings.

Gravity Drain
A system that drains excess water in the under counter ice machine without the need to monitor and empty water manually.

I

Independent Temperature Zones
Tailor the temperature in two distinct zones to help ensure that food, beverages and wines are stored in optimal conditions within beverage centers or wine cellars.

L

LED Theater Lighting
Ramp-up LED lighting gradually increases to full intensity, illuminating the refrigerator and freezer interior and minimizing shadows.

M

Max Cool/Cold Option
A selectable feature that lowers internal temperatures for 24 hours for loading groceries or times of heavy use.

Max Ice Option
A selectable option that increases ice production during times of heavy use (and automatically at start-up). When selected for the ice machine, the temperature automatically adjusts to its lowest setting.

O

Obsidian Interior Finish
The exclusive dark, Obsidian interior showcases food items throughout the refrigerator, and provides a sharper contrast than white interiors. Includes matching crisper drawers and freezer.

P

Precision Temperature Management™ System
A sensor-controlled system that uses a single variable-speed compressor with an independent sensor in each compartment to monitor and adjust temperatures.

Produce Preserver
A filter, which absorbs ethylene gas produced by ripening fruits and vegetables, designed to help ethylene-sensitive produce stay fresher up to four days longer.

Pulsed Defrost
Maintains freshness of frozen foods with an intuitive system that minimizes temperature swings helping to prevent freezer burn and frost buildup.

Q

Quad Sensor™ Climate Control System
A temperature control system that features four temperature sensors. The sensors work together to maintain consistent climate control for outstanding food preservation.

QuickMeasure Function
A dispenser function on select built-in side-by-side refrigerators. This function rapidly dispenses water and displays the amount of water dispensed.

R

Removable Base-Grille Water Filter
A filtration system which includes a water filter located on the base grille of the refrigerator. The filter reduces chlorine taste and odor and scale build up.

S

Sabbath/Vacation Mode
This feature allows the door of the refrigerator or freezer to be opened or closed during the Sabbath or other religious holidays without directly turning on or off any lights, digital readouts, solenoids, fans, valves, compressor, icons, tones or alarms.

72-Inch Counter-Depth Design
Three inches taller than a traditional 69-inch refrigerator, the extra height fills the gap usually left at the top when installed under standard cabinetry. The depth of the refrigerator cabinet enables it to align closely with kitchen cabinetry for a built-in look.

Soft, Auto-Close Racks with Beechwood Tines
Extendable wine racks (six on the wine cellar, two on the beverage center) smoothly roll out on ball-bearing glides, even when fully loaded. Wine bottles are gently cradled neck-to-end.

Spill-Proof, Adjustable Glass Shelves
Clear glass shelves with raised edges help to contain spills and leaks and can be adjusted to meet individual storage needs. Select refrigerators feature adjustable shelves that slide out for convenient access.

Stability-Enhanced Freezer Basket
An upper wire shelf that slides out for easy access and viewing. The shelf is mounted to a glide system to provide enhanced stability and ensure easy operation.

T

Temperature-Controlled Gourmet Bay™ Drawer with Self-Opening Lid
A storage drawer with an adjustable temperature control that allows chilled air to circulate around the drawer, keeping foods stored inside cooler than the rest of the fresh food section. Helps keep contents such as deli or dairy items fresh longer and also helps protect foods from drying out due to the indirect airflow.

TriSensor™ Electronic Climate Control
A temperature control system that features sensors in the fresh food and freezer compartments and an external ambient room temperature sensor that provides exceptional, consistent climate control.

Twin Fresh™ Climate Control System
A temperature management system that features sequential dual evaporators to create true independent cooling systems for optimum humidity and temperature control.

U

UV-Resistant Thermal Glass Door
Ultraviolet-resistant, double-paned thermal glass door filters out harmful rays, maintains set temperatures and protects wines and bottle labels.

Dishwashers

B

Built-In Water Softener
The built-in water softener softens water to optimal hardness level to enhance performance, helps protect the dishwasher from limescale, and reduces spots and water marks on dishes and glasses.

C

China/Crystal Cycle
A selectable, wash cycle that gently cleans lightly soiled or delicate items by repeatedly pausing the wash action during the cycle.

Condensation Drying
A natural drying process, also known as air drying, that is available on all Jenn-Air® TriFecta™ dishwashers by de-selecting active drying options. It is the only option available on many dishwasher brands.

continued next page…

Dishwashers (continued)

Cookware/Bakeware Cycle
Cookware/Bakeware cycle uses the maximum amount of water and heating time for cleaning hard-to-clean, heavily soiled pots, pans, casseroles and regular tableware.

Culinary Caddy
A deep basket adds space for tall kitchen utensils, keepin them upright for cleaning.

Custom Overlay Design
Custom overlay panel-ready appliances are delivered without panel(s) and handle(s) which must be ordered separately.

Cycle Status Light
Projects a red, LED light onto the floor when the dishwasher is running and shuts off when dishes are ready.

D

Detergent Tab Tray
An upper-rack tray on the flush dishwasher designed to hold detergent or tablets in place for a dedicated spray jet to dissolve slowly and more efficiently.

Dual Wattage Heating Element
The dual wattage heating element helps to provide high-performance drying. It also provides the necessary power to heat water for the Sani Rinse option.

E

ENERGY STAR® Qualified
Jenn-Air® dishwashers that meet ENERGY STAR® requirements exceed minimum federal energy standards, per ENERGY STAR® specifications, effective January 29, 2016.
®ENERGY STAR is a U.S. registered mark.

Exterior Cycle Indicator
An exterior cycle indicator light located on the front of select dishwashers displays three colors to give intuitive feedback on the cycle status.

Extra Dry Option
An option on the flush dishwasher that adds additional wash performance, extra water and higher temperatures to enhance the selected cleaning cycle.

Extra-Tall-Item Sprinkler Head
A specially designed sprinkler head that can be added when the upper rack is removed to provide targeted wash action for extra tall items.

F

Fold-Away Shelf
A lower rack shelf that folds down and adds space to either lay down long kitchen utensils or load cups and dishes in two layers.

40 dBA Quiet System
Sound-silencing technology that includes an alternating wash system and a variable-speed motor, keeping all dishwasher models very quiet.

4-Hour Delay Start Option
Allows postponing dishwasher operation for four hours.

Fully Integrated Console
This console's intuitive design locates the touch controls on the door's top surface for a clean appearance.

H

Heavy Wash Cycle
Heavy Wash cycle uses the maximum amount of water and heating time for cleaning hard-to-clean, heavily soiled pots, pans, casseroles and regular tableware.

Hi Temp Option
Provides an increased water temperature during washing and/or additional wash time for hard-to-remove soils.

I

Interior Metal Accents
Brushed stainless steel accents showcase attention to detail and a firm, substantial upper rack handle showcase craftsmanship and attention to detail.

L

Light Item Clips
Repositionable clips that secure lightweight items during the wash cycle, preventing overturning or falling through the rack.

M

Manual Upper Rack Adjusters
Upper rack adjustment system enabled by removing the rack then reinserting it into the dishwasher at a different height, creating an optimal loading space for a variety of dish and cookware sizes.

Multi-Point LED Theater Lighting
LED theater lighting gradually increases to full intensity, illuminating the dishwasher tub and minimizing shadows.

N

Normal Wash/Normal Tableware Cycle
A cycle that is used for normal amounts of food soil. The energy-usage label is based on this cycle.

Nylon-Coated Racks with Ball-Tip Tines
Racks that cushion and protect dishware during loading and washing, gently cradling items to help prevent movement during the wash and drying cycles.

O

1-Hour Wash Cycle
A wash cycle for dishes with light soil, especially useful when entertaining. The number of fills is reduced, allowing the cycle to be completed in about one-third the time of the Normal Wash cycle (not including drying time).

P

Partial Load Option
An option on the flush dishwasher that reduces water and energy levels to wash small, lightly soiled loads (up to half the dishwasher's capacity).

Precision Dry® Option
A selectable dishwasher option that chooses the optimum dry cycle based upon the type of load washed. This option activates a dual-wattage heating element, which provides radiant heat and helps ensure dry dishes at the end of the drying cycle.

Precision Dry® Plus Option
A selectable dishwasher option that chooses the optimum dry cycle based on the type of load washed. This option activates a ventilation fan that draws dry air into the dishwasher, and the dual-wattage heating element helps to provide radiant heat and to ensure dry dishes.

Premium Upper Rack Adjusters
Premium upper rack adjustment system makes it easy to raise the rack by simply lifting it or lower the rack by pressing the adjusters (without removing the rack from the dishwasher). Creates an optimal loading space for a variety of dish and cookware sizes.

R

Refresh/Rinse Cycle
A cycle that rinses soiled dishes, glasses and silverware without detergent, for later washing and can also refresh clean dishes prior to place-setting.

Removable 3rd Level Rack with RollerGlide™ Rails
This third-level, topmost rack provides room for difficult-to-place items, which neither fit ideally in the silverware basket nor in the other racks.

RollerGlide™ Rails
The strong and stable upper rack moves with quiet and ease – even when fully loaded – on guide rails featuring a snugly fitting wheel design.

S

Sani Rinse/Sanitize Option
When selected, the final rinse water is heated to 155°F (68.3°C), eliminating 99.999% of food soil bacteria. This meets national requirements for household sanitation.

Sensor Fill System
The sensor fill system maximizes cleaning efficiency and effectiveness by sensing water flow at the pump and ensuring the optimal amount of water is used to thoroughly clean dishes.

Sensor Wash Cycle with ClearScan™ Turbidity Sensor
A selectable cycle that calibrates the dishwasher to use the optimal way to clean dishes, detecting changes in water temperature to determine load size. A turbidity sensor monitors water clarity (to detect load size) and a microprocessor adjusts the water temperature to match the dish soil level, and help save water and energy.

Soft Spring™ Dishwasher Salt
An additive for a built-in water softener on the flush dishwasher that softens water to enhance performance and protect from limescale buildup.

Stainless Steel Tall Tub
The high-grade stainless steel interior is elegant, durable and resists discoloration while providing optimal heat transfer for enhanced drying performance. The tall tub design has room for both meal prep and dinner dishes.

SteamFinish Option
Reduces water spots by generating a mist of steam before the final rinse cycle to help enhance shine and finish on glassware.

T

3-Stage Filtration
A coarse filter, filter screen and bottomless fine filter cup keep oversized and fine food particles out of the pump and prevent them from being recirculated onto dishware.

Top Rack Wash Option
This selectable option washes dishes on the top rack only and can be used with any wash cycle.

TriFecta™ Wash System
The powerful, quiet and energy-efficient wash system, found on all Jenn-Air® tall tub dishwashers, features alternating wash action in dual wash zones, three-stage filtration, a variable-speed motor and pressurized wash arms.

2-Position Fold-Away™ Tines
A row of tines in dishwasher racks that can be adjusted to two positions to make room for various-sized dishes.

U

UltraGlide Rails
Strong and stable racks move with quiet and ease – even when fully loaded – on smooth, easy-gliding rails with ball bearings.

W

WaterLock™ Plus Flood Protection Technology
A technology that detects an electronic malfunction in the dishwasher and prevents water from flooding the kitchen or damaging the electrical system by shutting off water to the dishwasher.

Compactors

C

Compaction Ratio
Models feature an option having a 5:1 compaction ratio that reduces trash volume up to 80% by keeping the ram at the bottom of the compactor to maintain pressure on the contents.

Compress Option
A selectable option that constantly keeps the ram at the bottom of the compactor using 2,300 pounds of pressure to maintain pressure on the trash, thereby reducing trash volume.

F

Fan with Charcoal Filter
Part of the advanced odor management system, a fan circulates air throughout the compactor and activates a charcoal filter to reduce unwanted odors.

O

Open/Start Pedal
A foot pedal that allows the compactor to be opened or started by applying slight pressure on the easy-action, full-width pedal.

S

Side Release Bin
Compactors can be accessed by a latch from the side to allow for easy operation and cleanup.

T

2-Point Drive System
Feature of compactors that helps avoid jams from uneven loading.

JENN-AIR® | Warranty

PLATINUM WARRANTY

This limited warranty will cover parts and labor to repair or replace, under normal residential use.* Individual products may provide additional warranty coverage on specific parts and systems. Warranty terms are subject to change. Visit jennair.com for the most current warranty details including applicable terms, conditions, and exclusions, or consult the Use & Care Guide provided with your product.

10 YEAR LIMITED WARRANTY

*Effective April 1, 2015, current models of Jenn-Air® appliances purchased on, or after, April 1, 2015, will be covered for two years from the date of purchase.

OWNER'S RESPONSIBILITIES

The customer has certain responsibilities which must be satisfied to qualify for coverage under these warranties. For all products, the owner is responsible for providing normal care and maintenance in accordance with the Use & Care instructions, providing proof of purchase on request, proper installation and making the appliance reasonably accessible for service.

WARRANTY SERVICE

Under the limited warranty, when labor is provided, service must be performed by an Authorized Jenn-Air Service Contractor. To obtain service, contact the dealer from whom the unit was purchased, an authorized Service Contractor or Jenn-Air Customer Assistance. In the U.S.A. and Canada, call 1-800-JENN-AIR (1-800-536-6247). Please include model number, serial number and date of original purchase in all correspondence. Service will be provided during normal business hours. This warranty gives you specific rights, and you may also have other rights which vary from state to state or province to province.
